Abstract

The serial ‘Results of the research cruises of FRV *Walther Herwig* to South America’ was published between 1967 and 2010. A recent comparison between the database of the collection of fishes housed at ZMH in Hamburg and the respective last faunal lists of marine fishes from Argentina and Uruguay revealed that the ZMH collection contains specimens which represent dozens of first records or at least first evidence-based records for the Exclusive Economic Zones of these countries and, in addition, for the Malvinas/Falkland Islands. To publish these records, the present contribution shall resurrect the serial and thus, continue with what used to be a story of success in the past.

Here, we present a complete list of titles published in the serial, together with information both on Dr. Gerhard Krefft, the initiator of the serial, and on the research vessel *Walther Herwig*.

Resumen

La serie ‘Results of the research cruises of FRV *Walther Herwig* to South America’ se publicó entre 1967 y 2010. Una comparación reciente entre la base de datos de la colección de peces del ZMH en Hamburgo y las respectivas listas faunísticas de peces marinos de Argentina y Uruguay reveló que la colección del ZMH contiene especímenes que representan docenas de primeros registros, o al menos primeros registros basados en evidencia, para las Zonas Económicas Exclusivas de estos países y, además, para las Islas Malvinas. Para publicar estos registros, la presente contribución resucitará la serie y, así, continuará con lo que fue una historia de éxito en el pasado.

Aquí presentamos una lista completa de los títulos publicados en la serie, junto con información sobre el Dr. Gerhard Krefft, su creador, y sobre el buque de investigación *Walther Herwig*.

Introduction

Scientific support for German coastal and marine fisheries began with the establishment of the *Commission for the Investigation of the German Seas* in 1870. However, after the first decade of its activity, no real improvements or successes could be demonstrated. This only changed in 1884 when Walther Herwig, an administrative lawyer with a talent for problem analysis and organization working for the Prussian administration, developed a special program to promote a strong and modern marine fishery and its needs. The practice-oriented scientific investigations for the benefit of the fishery were supplemented by the association’s own research expeditions on chartered vessels. Due to the international nature of the issues and the vastness of the marine areas to be investigated, the exchange of ideas with other nations was a matter of course. These international experiences led Herwig to become one of the co-founders of the *International Council for the Exploration of the Sea* (ICES) in Copenhagen (1902) and its first president. This basic research, now supported by the first German fisheries research vessel *Poseidon*, continued even after Herwig’s retirement in 1907 until the outbreak of the First World War. After the war, international connections were severely damaged for several years, German fisheries research was no longer nearly as intensive and successful as before, and could not regain its former glory until the Nazi regime brought state organizations into line with the government in 1935. Detailed descriptions of these developments and the people associated with them can be found in Wegner (1995, 2010) and Stehmann (1997).

* As practiced by Krefft in IV. for I., II., and III., LXXVI. (see list below) is hereby retroactively assigned to be part of this serial.

Methods

Herein we have cited isolated pieces of information or, in some cases, used whole passages of text from the plenty publications available for each of the sections without referencing the original authors. Most of the information is available from several papers, in huge parts overlapping. Instead, we offer a special section of references for each of the subjects and additionally for the seven expeditions undertaken by the *Walther Herwig* to the southwest Atlantic Ocean.

ZMH	Zoologisches Museum Hamburg

Gerhard Krefft – initiator of the serial

When in 1938 Gerhard Krefft started working at the *Institute of Sea Fisheries* in Hamburg he could certainly not imagine the important role he would take there and which adventures he would live during the rest of his professional life.

In fact, his career at the ISH got off to a somewhat rocky start, as he was called up for military service at the outbreak of World War II, after only one year at the ISH. After undergoing the entire war and briefly being a prisoner of war, he only returned to the ISH at the end of 1945. Especially during the first post-war years, feeding the population had to be given top priority, and consequently the ISH, originally founded to support the fishing industry, worked exclusively on precisely this.

After several years of routine fishery research, Krefft was appointed as a whaling observer, an opportunity that reawakened his spirit of adventure. From September 1951 to April 1952, he participated in a whaling cruise running from Rotterdam to the Pacific Ocean by way of the Caribbean Sea and Panama Canal. After this cruise, Krefft began to notice and document the rare species found in the landing of German fresh-fish trawlers which were steadily extending their field of operation in the North Atlantic. From 1953 onward, he regularly published annual reports on "Rare Fishes", as well as his "Ichthyological Contribution from the Institute of Sea Fisheries". It was from this time that the embryonic ISH reference fish collection, composed of a few, rare North Sea and North Atlantic species and a handful of exotics from the whaling cruise, began to grow. By the beginning of the 1960s, the ISH collection had reached a fair size and had a good representation of mainly demersal northern North Atlantic species. A clear distinction between ichthyology as basic science and fishery biology as a field of applied zoology did not exist at ISH during these early years.

Yet, the study of the systematics and zoogeography of chondrichthyans, one of Krefft's ichthyological preferences, dates back to this time.

The breakthrough for systematic ichthyology at ISH came in 1962, the date when the four institutes of the Federal Research Centre for Fisheries moved from temporary premises to the new headquarter building at the Palmaille in Hamburg-Altona. The Federal Ministry for Agriculture, Food, and Forestry directed that systematic ichthyology and the establishment of a scientific reference collection of marine fishes become an official policy for ISH. Krefft was asked to implement this directive. The decision had been taken in view of the commissioning of a stern-trawler fishery research vessel, the *Walther Herwig*, in 1963 and the planned initiation of exploratory cruises throughout the entire Atlantic Ocean. On this basis, and with the proven superiority for commercial gear also for ichthyological sampling in mind, Krefft developed the concept of sampling the continental slopes and oceanic midwater region with large commercial trawls and of fully documenting all the results, which would be linked to a totally representative collection.

Fig. 1. Gerhard Krefft in his office at the ISH before his retirement in March 1977.

This would be ecosystem research on a large scale, with revolutionary results for oceanic ichthyology. Furthermore it would only be attainable with the heavy involvement of the most competent German and foreign taxonomists. The midwater transect, conducted diagonally across the Atlantic from Europe to Argentina in 1966 to depths in excess of 2200 m, became the first test in practice of the new sampling concept. It was followed by a survey of the Argentinean shelf and slope using a commercial 140-foot bottom trawl to 1200 m. Both fully met all expectations - for not only did the catches quantitatively exceed those of more traditional scientific gears but they also produced a far better comprehension of the qualitative composition of the fish and invertebrate fauna. Consequently, enormously large samples were taken back to the ISH and ZMH collections. Further cruises across the Atlantic with the participation of international teams of fish and invertebrate taxonomists followed in 1968, 1971, and 1973. Within a few years the ISH collection was receiving international attention and recognition.

Krefft's dream had taken form. To disseminate this knowledge, in 1967 he initiated a new publication series under the title 'Results of the research cruises of FRV *Walther Herwig* to South America'.

***Walther Herwig* – vessels and expeditions to South America**

With the commissioning of the FRV *Anton Dohrn* in 1955, faunal surveys, for example in the waters of Greenland, Iceland, and the Iceland-Faroe Ridge, increasingly became part of the ISH's responsibilities. These voyages were extended to the Southern Hemisphere in 1963 when the *Walther Herwig* (fig. 2), the most modern and powerful German fishery research vessel to date, began operations for the ISH. In addition to expeditions to the coasts of South Africa, the southwest Atlantic became a focus of interest. The *Walther Herwig*-named vessels (*I* and *II*) undertook four expeditions to the coasts of Argentina and Uruguay, as well as later three cruises to the Atlantic sector of Antarctic waters (table 1).

During the first Antarctic voyage, the *Walther Herwig* was supported by the *Weser*, which mainly fished the area between South Georgia and the Antarctic Peninsula, but to a much lesser extent was also active around the Malvinas/Falkland Islands.

Table 1. Cruises of the *Walther Herwig* to the Southwest Atlantic Ocean and the Atlantic sector of the Antarctic. Station numbers are limited to those located within EEZ-AR, EEZ-UY, or FCZ-FK, not including Brazilian or international waters.

	1	20.Jan. - 04.Mar.1981	central Scotia Sea	-
	2	08.Mar. - 26.Mar.1981	Bellingshausen Sea to South Georgia	-

Although the voyages were primarily dedicated to exploring new fishing grounds and testing and developing new fishing techniques, in addition to fish, invertebrates as mollusks, plankton, etc. were also scientifically studied. In addition to the ISH staff, taxonomists from various countries were present on board during all voyages, including those from the South American countries bordering the sampled areas.

However, the results published by Argentine authors following the expeditions were almost exclusively limited to species of interest to fisheries. This is not surprising, given that the respective cooperation agreements were concluded with local fisheries institutes, not with museums, universities, or other taxonomically active institutions. With his important work on the systematics of Zoarcidae, Átila Gosztonyi was, unfortunately, the only South American ichthyologist to show taxonomic interest in the collected specimens. The collections made by the *Walther Herwig* in the Exclusive Economic Zones of Argentina, Uruguay and the Malvinas/Falkland Islands in the subsequently published descriptions included type specimens of 29 new species and numerous first records (table 2).

fig. 2 Walther Herwig I. (photo: R. Huxmann, 1972)

fig. 3 Walther Herwig II. (photo: H. Wulf, 1988)

After only a decade in service with the BFAFi, the *Walther Herwig I* was decommissioned as a global research vessel, converted and modernized, and then took over other tasks under her new name *Anton Dohrn II*.

The new FRV *Walther Herwig II* (fig. 3), which was launched in 1973, offered even better technical capabilities and hence opened up a wider range of research possibilities than its predecessor. Commercial midwater gear could now be towed to more than 3000 m, whereas depths of 2200 m were attainable with benthic hauls. Surveys were focused on the North Atlantic deep-water fauna (1973-1985). In the Atlantic sector of the Southern Ocean (1975-85) and in the Southwestern Atlantic shelf and slope off Argentina (1978). It was, indeed, fitting that Krefft's last voyage as head of the ISH-Ichthyology Group was to Antarctic waters, when he sailed in the austral summer of 1975/76 as chief scientist on board FRV *Walther Herwig* on the first leg of the first fishery expedition to Antarctica by the Federal Republic of Germany.

The longest research cruises ever undertaken by a *Walther Herwig* in the Southwest Atlantic were numbered 30 and 31. These were the second Antarctic expedition and a subsequent survey on the Argentine shelf and slope in 1977-78. The *Walther Herwig* was away from Bremerhaven, her home port, for a total of 14 months.

There's life in the old dog yet. Resurrection from the ashes after 15 years.

Investigations of largely unknown fish faunas off Argentina, Uruguay, and finally in Antarctic waters were almost impossible without the collaboration of qualified fish taxonomists. Thus, at the direction of the responsible ministry, a working group on ichthyology was established at the ISH in the early 1960s, and at the same time, the establishment and scientific processing of a reference collection of Atlantic fishes was initiated as its primary task.

After four expeditions to the southwest Atlantic, the ZMH, where the ISH collection was transferred to in 1993, very probably still hosts the most complete and largest collection of Argentine and Uruguayan marine fishes. Thanks to Krefft's forward-looking approach, this collection can serve as a resource for diverse research approaches for many generations of ichthyologists to come.

A comparison of the existing collection data at the ZMH with the latest faunal lists of Argentina (Mabragaña & Cousseau 2021), Uruguay (Nion 2016), and the Malvinas/Falkland Islands (in preparation) already reveals a wealth of previously unpublished information for these three national waters (table 3). Due to a lack of data accuracy, Brazil, South Georgia & South Sandwich Islands, and the neighboring international waters could not yet be included in this analysis.

Table 3. An educated guess based on our current knowledge: collection data and potential novelties from the territorial zones in the Southwestern Atlantic collected by the *Walther Herwig* and today available at the ZMH collection.

	#1 species in ZMH	#2 #1 in number of collection lots	#3 #1+2 from WH stations	#4 lots with type specimen in #2	#5 potential first records in #1	#6 potential first evidences in #1
EEZ-AR	207	797	291	19	16	20
EEZ-UY	229	329	54	21	38	47
FCZ-FK	88	249	86	10	17	15
totals	-	1.375	431	50	71	83

These figures are based on the species names currently assigned to the lots in the collection database, most specimens having been determined some 50 years ago by the ichthyology staff of ISH.

If the quantities of potential novelties shown in columns 5 and 6 of table 3. are realistic or not, can only be known after redetermining thousands of specimens from hundreds of lots. Either way, the results to be

expected will require dozens of publications and thus, it is certainly justified to reactivate Krefft's serial – starting with the present paper.

The rapid decrease of papers published in this serial after Krefft's death in 1993 (fig. 6), shows very clearly that Krefft was personally both, the driver and the motivator, for 'his baby'. After Krefft's death the second author of the present contribution (MS) took the responsibility to keep track of the consecutive numbering and indicated to the authors of new publications the respective next available number to be used for a subsequent paper.

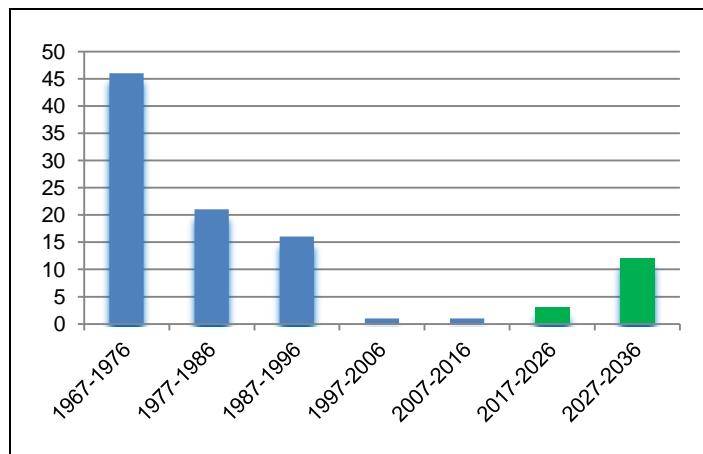

Although between 1967 and 2010 a total of 75 contributions has been published in the serial, a complete list of the included titles has never been made available. It could never have been published due to a computer crash and the loss of all data more than 20 years ago, during the dawn of digitalization in Germany's public administration, when at ISH a mechanical hard disk broke without having a backup available.

We take the opportunity to present below the complete list of all titles published so far in the serial 'Results of the research cruises of FRV *Walther Herwig* to South America'. In a further step all these publications shall soon be made available as pdf-files in a new section '*Walther Herwig* library' on www.pecescriollos.de, where also all future contributions will be added.

fig. 6

Resurrection from the ashes:

Number of works published in the series 'Results of the research cruises of FRV *Walther Herwig* to South America' per decade since 1967 (blue) and the potential future additions based on the novelties shown in columns #5 and #6 of table 3 (green).

List of contributions published in the serial

(*retroactively assigned to be a publication in this series by Krefft in IV.)

Paraholtbyrnia Krefft, 1967

- synonym of *Holtbyrnia* Parr, 1937
- Alepocephaloidei: Platytroctidae

Paraholtbyrnia cyanocephala Krefft, 1967

- valid as *Holtbyrnia cyanocephala* (Krefft, 1967)
- holotype: ZMH 25191, ex ISH 194-1966
- paratypes: ZMH 25192 (4), ex ISH 294-1966
ZMH 25193 (1), ex ISH 441-1966
ZMH 25194 (2), ex ISH 494-1966
ZMH 25325 (3), ex ISH 332-1966

Krefft, G. (1968):

Ergebnisse der Forschungsreisen des FFS *Walther Herwig* nach Südamerika.

II*. Neue und erstmalig nachgewiesene Knorpelfische aus dem Archibenthal des Südwestatlantiks, einschließlich einer Diskussion einiger *Etmopterus*-Arten südlicher Meere.

Archiv für Fischereiwissenschaft 19 (1): 1-42

(*retroactively assigned to be a publication in this series by Krefft in IV.)

Etmopterus gracilispinis Krefft, 1968

- valid as *Etmopterus gracilispinis* Krefft, 1968
- Squaliformes: Etmopteridae

- holotype: ZMH 24989, ex ISH 1051-1966
- paratypes: ZMH 24990 (1), ex ISH 1061-1966
ZMH 24991 (5), ex ISH 1573-1966
ZMH 24992 (1), ex ISH 935-1966

Post, A. (1968):

Ergebnisse der Forschungsreisen des FFS *Walther Herwig* nach Südamerika.

III*. Die Paralepididae (Pisces) der 15. Forschungsfahrt des FFS *Walther Herwig*.

Zoologischer Anzeiger 180 (1/2): 139-146

(*retroactively assigned to be a publication in this series by Krefft in IV.)

Krefft, G. (1968):

Ergebnisse der Forschungsreisen des FFS *Walther Herwig* nach Südamerika.

IV. *Luciosudis* Fraser-Brunner, 1931, ein valides Genus der Familie Scopelosauridae (Osteichthyes, Alepisauroidei).

Archiv für Fischereiwissenschaft 19 (2/3): 95-102

Post, A. (1968):

Ergebnisse der Forschungsreisen des FFS *Walther Herwig* nach Südamerika.

V. *Notolepis rissoi* (Bonaparte, 1841) (Osteichthyes, Iniomni, Paralepididae).

Archiv für Fischereiwissenschaft 19 (2/3): 103-113

Krefft, G. (1969):

Ergebnisse der Forschungsreisen des FFS *Walther Herwig* nach Südamerika.

VI. Fische der Familie Centrolophidae (Perciformes, Stromateoidei).

Archiv für Fischereiwissenschaft 20 (1): 1-9

Post, A. (1969):

Ergebnisse der Forschungsreisen des FFS *Walther Herwig* nach Südamerika.

VII. *Pontosudis quadrimaculata* spec. nov. (Osteichthyes, Iniomni, Paralepididae).

Archiv für Fischereiwissenschaft 20 (1): 10-14

- Pontosudis quadrimaculata* Post, 1969
- valid as *Uncisudis quadrimaculata* (Post, 1969)
 - Aulopiformes: Paralepididae
 - holotype: ZMH 25218, ex ISH 698-1968
 - paratype: ZMH 25219 (1), ex ISH 698-1968

Post, A. (1969):

Ergebnisse der Forschungsreisen des FFS *Walther Herwig* nach Südamerika.

VIII. *Dolichosudis fuliginosa* gen. nov. spec. nov. (Osteichthyes, Iniomni, Paralepididae).

Archiv für Fischereiwissenschaft 20 (1): 15-21

- Dolichosudis fuliginosa* Post, 1969
- valid as *Dolichosudis fuliginosa* Post, 1969
 - Aulopiformes: Paralepididae
 - holotype: ZMH 24974, ex ISH 2007-1968

Krefft, G. (1970):

Ergebnisse der Forschungsreisen des FFS *Walther Herwig* nach Südamerika.

IX. Zur Systematik und Verbreitung der Gattung *Lampadena* Goode & Bean, 1896 (Osteichthyes, Myctophoidei; Myctophidae) im Atlantischen Ozean, mit Beschreibung einer neuen Art.

Berichte der Deutschen Wissenschaftlichen Kommission für Meeresforschung 21 (1-4): 271-289

- Lampadena pontifex* Krefft, 1970
- valid as *Lampadena pontifex* Krefft, 1970
 - Myctophiformes: Myctophidae: Lampanyctinae
 - holotype: ZMH 25102, ex ISH 662-1964

Stein, M. (2010):

Results of the research cruises of FRV *Walther Herwig* to South America.

LXXV. Trans-Atlantic oceanographic measurements during South America expeditions 1966-1976 of the Institute of Sea Fisheries, Hamburg, Germany.

In: Wegner, G. & V. Siegel (eds.): 100 years of research at the Institute of Sea Fisheries and its precursors in Hamburg, Germany. Journal of Applied Ichthyology (special issue): 32-40

Koerber, S. (2024):

Results of the research cruises of FRV *Walther Herwig* to South America.

LXXVI*. Lanternfishes (Myctophidae) collected by the German research vessel *Walther Herwig* in the Exclusive Economic Zones of Argentina and Uruguay.

Ichthyological Contributions of PecesCriollos 85: 1-51

(* herein retroactively assigned to be a publication in this serial)

Acknowledgments

We are especially thankful to Alexander 'Butch' Hulley from South Africa, Átila Gosztonyi from Argentina, and Jørgen Nielsen from Denmark, all of them former participants in cruises of the *Walther Herwig* to the Southwestern Atlantic Ocean, who acted as reviewers and improved the manuscript with their comments significantly.

For making literature available to us thanks are due to Stefan Keune, interlibrary loan service of the public library at Oberhausen, and www.Digiself.de, where on behalf of the German Maritime Museum the journal 'Archiv für Fischereiwissenschaft' is available as digital files.

support & grant

Since 2003 PecesCriollos is a long-term project supported by the [German Ichthyological Society](#) (GfI). This project, including the **ICP** journal, would not have been possible without GfI's granting.
